

Strategic Operational Assessment Program

Our [Strategic Operational Assessment Program](#) is essential to maintaining a healthy business and network environment. AME's program provides the necessary information you require to make smart business decisions regarding planned modifications or new technologies. The Program could also proactively provide you with early warning notifications to many hidden problems and issues. Most importantly, our [Strategic Operational Assessment Program](#) will provide you with a map and baseline to help you forecast your technology integration with your business goals.

A detailed report of business actionable items will be provided to you at the conclusion of the [Strategic Operational Assessment Program](#). After the Assessment has been completed, you may wish to choose *The AME Group* to implement the recommendations to your network infrastructure. Successful organizations need a way to streamline their IT infrastructure, improve operational efficiencies, and make the right technology investments to support their business. *The AME Group* can assist you with those goals by providing a [Strategic Operational Assessment](#).

How can this benefit [your business](#)?

Benefits of the [Strategic Operational Assessment Program](#):

- **Business Planning:** *The AME Group* will provide you with the necessary documentation for your business planning that will detail your network infrastructure in order to restore your network due to an outage, a disaster, or staff turnover.
- **Risk Mitigation:** Licensing compliance is necessary for your business to avoid costly penalties from software manufacturers. *The AME Group* will document your business applications and review your current licenses to ensure that you are in compliance.
- **Cost Optimization:** Before assimilating new technologies into your business, you need to confirm that your network can support the implementation, ensuring your investment provides the desired return on investment. *The AME Group* will document the current state of your network and ensure that it can support your new investment.
